

**Matthias Gunzer**

Professor Matthias Gunzer is the Head of the Laboratory of Molecular Immunology at the Institute for Molecular and Clinical Immunology at the Otto-von-Guericke University Magdeburg, Germany. The research interest of his group is to characterize the dynamics of immune cell behaviour, their motility and migratory pattern as well as formation of cell-cell interaction within the course of the immune response *in vivo*. His laboratory employs a wide range of specialized imaging technologies by which they investigate how immune cells function *in vivo* in important organs such as the lymph node, the bone marrow, the brain and the lung.
